#### NOTES:

The interview was conducted using Computer Assisted Self-Interviewing (CASI), in which respondents read questions from and enter data directly into a laptop computer. The script for the questionnaire uses a variety of 'textfills' to customise question wording so that it is appropriate to individual circumstances. All textfills are signalled in the paper questionnaire by the character '^'. For example, wherever the text reads ^he, the computer will substitute the appropriate pronoun; wherever the text reads ^CFName, the computer will substitute the child's actual name.

Questions are also often routed on key variables – e.g. gender of participant, whether they are part of a lone or two-parent household, etc. Routing is displayed in italics alongside the question/variable name.
